

# Attendance Planner – Silent Installation

## Silent Installation

---

Installer is Inno Setup. An unattended installation is possible by using command line parameter `/verysilent`.

Use link [www.attendance-planner.com/download/SI\\_Parameters.pdf](http://www.attendance-planner.com/download/SI_Parameters.pdf) for a list of all parameters.

## Preset Data Folder

---

You can preset the path to the common data folder. So users do not have to select this folder after first program start by using menu option *File - Change Data Folder*.

### Option # 1

Execute

```
"%ProgramFiles%\Attendance Planner\APlaner.exe" "/silent /setpath:path"
```

In a 64-bit version replace `%ProgramFiles%` by `%ProgramFiles(x86)%`. Replace `path` by the path to the data folder. It is accepted with drive letter `X:\Folder\Folder` or server name `\\Server name\Folder\Folder`.

### Option # 2

The path to the data folder is stored in the file *APlaner.dat*. The file is located in the folder `C:\Users\Public\AppData\Local\VirtualStore\Program Files\Attendance Planner`.

If you have chosen the data folder on a computer by using menu option *File - Change Data Folder*, you can copy the file *APlaner.dat* from this computer to the user's computer.

To use this option, the program must already have been started once on the user's computer, because the folder `C:\Users\Public\...\Attendance Planner` is created at the first start of the program and not during installation.

If the location of the data folder changes later, you can do the same. Select the new location of the data folder by using menu option *File - Change Data Folder* on one computer and copy the file *APlaner.dat* from this computer to the other computers.
